

PL Rating Security

Data Sheet

PL Rating provides essential security features for the control and monitoring of access to information.

Secure Authentication

PL Rating is integrated with Vertafore Single Sign-On, which allows agents a secure, centralized location to manage carrier credentials and their agency and producer codes.

PL Rating has the following password parameters set:

- 8 character minimum password length, including both alpha and numeric characters
- 60 days until password expiration
- 12 passwords to be used before a password can be reused
- Multiple failed logins will lock an account until unlocked by a system administrator

Role-Based Access

Different roles may be configured for user accounts such as Agency Administrator, Agency User, Location Administrator, Location User, or Restricted User.

Data-at-Rest Encryption

Transparent data encryption (TDE) performs real-time I/O encryption and decryption of the data and log files.

Transmission Encryption

Web traffic to and from PL Rating is encrypted using SSL with extended certificate validation.

Audit Trails

Audit trails track successful and unsuccessful login activity.

For more information about PL Rating, please contact your Vertafore Account Manager at 800.444.4813 or visit vertafore.com.

Data Center Infrastructure

- PL Rating servers are located in our state-of-the-art data center, with guards, surveillance cameras, biometric access, and disaster recovery capabilities.
- PL Rating servers are behind multiple network firewalls, a web application firewall, and have anti-malware software installed, which is updated at least daily.
- The PL Rating computing environment is tested for security vulnerabilities twice a month, and is monitored 24/7 for suspicious computing activity.
