Web Services

Seamlessly integrate key applications with your management system via AIM Web Services. Open-integration empowered by APIs allows you to tailor your solutions to meet the specific needs of the ecosystem. These APIs bring a new level of modernization and standardization to our integration options, including RESTful services, user-friendly entity naming conventions, streamlined endpoint versioning, and a strong and resilient enterprise-level security model.

What's currently available via API

Vertafore has exposed a vast amount of data and information, with over 100 end points in the AIM API library and will continue to grow this catalogue. Within the API library and documentation, you will find a full array of methods including GET, POST, and PATCH.

AIM APIs are designed for:

- Faster service response
- Easier client integration
- Larger elastic scalability
- Higher security & infrastructure stability.

AIM API Categories:

- Activity
- Customer information
- Invoice
- Policy
- Quotes
- Systems

Accessing AIM APIs

AIM APIs can be accessed in the Developer Portal.

The Developer Portal:

The portal was designed with workflow at the forefront of the process in order to provide a world-class user experience.

- Delivers a standard source of documentation.
- Offers access to development tools.
- Sample code available to use in testing

Security:

Data and information security is at the forefront of our design work.

- TLS/SSL is utilized for establishing authenticated and encrypted links when installing webservice
- API platform leverages scopes as a means to provide control and easy permissions management
